

FIRESWITCH

FIRESWITCH

Prevent fires with the FireSwitch

Conduct's FireSwitch is the ideal solution for safely switching the DC circuit on and off. This creates a safe situation for firefighters. With this fire switch, the entire installation can be switched on or off at once. In the case of multiple inverters, the FireSwitch boxes can be daisy-chained together. By also incorporating surge protection, you have the ultimate all-in-one solution.

WHY FIRESWITCH?

- Switches off DC-voltage at the solar PV array.
- Switches DC off when AC-voltage fails or by central manual control.
- Multiple emergency stops applicable.
- Option for extension with Type 1+2 SPDs.
